Explanation of Practice Area Codes

(found at the end of each member's listing and in the AAPCSW Members by Area section)

To better promote our members for professional referral requests, the AAPCSW is launching our first modification to the member directory to include an index for **practice areas**. The intention is not to provide a definitive description of each member's practice; it is to highlight and make readily accessible information regarding services available from our members. The **practice areas** were created through a process of reviewing codes used by other organizations and those reflected in the referral requests on our list serve. It is understood that our members work from a unique perspective of both a social work "person in environment" context and the developmental approach afforded within psychoanalytically-informed treatment. Many other areas were considered (such as mood disorders, personality disorders, trauma), however, these were deemed to fall within routine treatment issues. Of those included, some areas are on the cutting edge and require special expertise or have potential legal and/or medical complications with which competent clinicians would have to be familiar. This effort is a beginning and we welcome feedback. Please remember that these **practice areas** are self-reported by our members without verification or endorsement by the AAPCSW.

Client Population	Modality(ies)	Treatment Issues
IN/CH = Infants and/or Children ADO = Adolescents YAD = Young adults AD = Adults OAD = Older adults	I = Individual F = Family C = Couple G = Group CM = Community	AD/O = Chemical and other addictive behavior D/OE = Disordered eating and body image EOL = End of life care CISD = Critical incident stress debriefing FOR = Forensic evaluation and treatment MTN = Mediation
